OBJECTIVE	Driven Cybersecurity undergraduate with hands-on experience in secure systems, penetration testing, and software development. Strong background in C++, Python, SQL, and Linux-based environments. Practical experience using industry-standard security tools including Nmap, Burp Suite, Metasploit, Hydra, John the Ripper, and Zphisher in controlled academic and lab settings. I am skilled in designing and analyzing security solutions through academic projects and ethical hacking practices. Quick learner with strong teamwork, time management, and problem-solving abilities.	
EDUCATION	Ghulam Ishaq Khan Institute of Engineering Sciences and Technology (GIKI)	Topi, PK (Sep 2023 – Present)
	BS Cybersecurity	
	Forman Christian College (FCCU)	Lahore, PK (Sep 2020 – Sep 2022)
	ICS	
	Unique High School	Lahore, PK (Jan 2018 – Aug 2020)
WORK EXPERIENCE	Matric with Sciences	
	Cybersecurity Intern – PITB Lahore	Jul 28 – Aug 29, 2025
	Cybersecurity Research & Projects – GIKI	Nov 2023 – Present
	• Gained insights into Security Operations Center (SOC) operations and workflows. • Worked with cybersecurity software and Linux-based tools.	
	• Conducted semester and lab projects on secure communication, log analysis, and penetration testing. • Hands-on work with C++, Python, PostgreSQL, Kali Linux, and common pentesting tools. • Applied data structures, cryptography, and secure system design in practical implementations.	
FINAL YEAR PROJECT	We are in the process of a project collaboration with PITB Lahore to develop an Automated SOC Analyst - a complete AI bot designed to perform every level/layer of a SOC analyst's job.	
ACADEMIC PROJECTS	Calories Tracking System (C++ OOP)	
	Cybersecurity Log Analyzer (parsing + threat reporting using linked lists, hash tables, BSTs, priority queues)	
	Secure Channel Communication (64-bit blocks; encryption/decryption with key delivery via WhatsApp API)	
	CEH Coursework – System Hacking Module (lab: privilege escalation, password attacks, system exploitation)	
	Wi-Fi Disruption Tool (ESP8266) – Deauthentication testing in controlled lab environment	

FYP Navigator: Built a platform to help students explore final year project requirements/resources with search & recommendation features (SQL + Node.js + HTML/CSS/JS).

AI based IDS & IPS- Built a project using ML algorithms that detects and prevents anomaly-based behavior using a dataset from keggel

AWARDS & ACHIEVEMENTS

— (Available upon request)

Tools SKILLS & Certification

C++, Python (basic), PostgreSQL/SQL, Kali Linux

Tools: Nmap, Burp Suite, Metasploit, Hydra, John the Ripper, Zphisher

MS Office (Excel/PowerPoint/Word), Video Editing

Interests: Usable Security, Human-Centered Security, Security Awareness, Empirical Security Research, Cloud Security, Blockchain Security
